

bluecube³

airo

Traditional polymer and even upholstered seats with vinyl coverings can be very uncomfortable in hot climates, sweat soaked clothes are inevitable when seated on non breathable surfaces on a hot day.

airo has been developed to eliminate this problem, keeping you cool and dry even on the hottest day in a entertainment venue.

airo seat and backrest mesh is breathable, allowing air to pass through preventing perspiration between the body and a plastic surface.

introducing centura **airo**

the general admission air cooled experience

Developed from our [centura](#) seat, **airo** borrows the same engineering principles that have well proven durability in many of the worlds premium venues. Tested to the exact same standards as its polymer forerunner, and utilising the exact same rail system and under structure, it is a new product with a reassuring history.

airo mesh is formulated for extreme outdoor conditions. Manufactured from PVC by world leader [Serge Ferrari](#), the [Batyline](#) mesh fabric has a 30 year proven track record in outdoor furniture such as sunbeds.

airo mesh membrane is attached to the seat and backrest support frames using our patented closure system, which unlike our competitors does not employ the use of glues which can fail and cannot be separated, whereas **airo** makes recycling possible!

airo is the latest seat module available from the bluecube range. The model is fully compatible with the bluecube seating rail system and all accessories including;

- Cupholders
- Scribe tablet arms
- Rail mounted armrests
- WiFi enclosures and power rail

airo armrests are rail mounted
allowing complete flexibility on
seat module spacing
